Language Redirector

User Manual

Summary

Sommaire

Overview

With Language redirector for Magento, offer a redirection service to your customer based on their browser language : if the current store language is different of visitor browser language, then our extension will check if another store view offers a best language. If so, a popup message is displayed to ask the customer if he wishes to be redirected to the other store.

If the visitor denies, his choice is saved and he wont be prompt anymore.

Installation

File upload

Source	Target	Comments
App/*	app/	Transfer all

Once all files are uploaded, refresh magento cache and log out from the magento admin panel.

Settings

Settings are available using menu system > configuration > Language redirector

Note : if you get an " Access Denied " message, you must log out and log in again from magento admin panel to reset permissions.

Setting	Description
Redirection message	For each store, you can set a custom message. Basically, the message must be translated according to the store language.

How to use

Once configuration is done, go on your website and select a store having a language different from your browser language. Then, a popup message prompt for redirection :
